Hi Eric/Nic,

Based on some of these questions that the USCG is asking about the RM data, I'd like for us to go back in and clean up some of this data in RM. Since a lot of the questions have to do with the Oil/Hazmat material type, I think if we populate the Oil/Hazmat field based on the type of facility (i.e. Vessels = Oil; Platform = Oil) or source of the spill it will answer a lot of the USCGs questions as well as help them in their response planning. We would look at the other info in RM (comments, photos) to make the determination. While we're at it, we can look at the other data and make sure it all looks good. Let me know if you are good with us doing this, and we'll go ahead and get started. Also let me know if you'd like to have a call to discuss, I'm around and I'll set it up.

Thanks,

Ben

Subject: USCG ESF-10 Slide for 16 Sep

Good Evening,

A few questions regarding our ESF-10 data:

1. Pls confirm that our pie chart reflects ALL ESF-10 targets. Likewise, pls confirm the numbers within the tan box also reflect overall totals - not USCG targets.
2. Will the "unknown" portion ever be reapportioned to one of the others? I thought that a

target may likely enter as an unknown but would ultimately be reassigned to the appropriate bin (oil, hazmat or orphan container). This doesn't seem to be the case. Currently we have 365 of the 520 unknown targets closed; leaving 155 open -- but still "unknown." We need to start reporting that data on this slide.

3. With a remaining total of 428 open targets, of which sunken vessels make-up 287, there are only 140 remaining "other than sunken vessels" targets. Of this 140, some may still be listed as "unknown." Is this all correct?

4. Do we agree that all of the 287 open sunken vessel targets are accounted for in the "oil" category (currently at 344)? I suspect that many of the sunken vessels contain both oil and hazmat (and there are currently only 22 targets listed under the hazmat category). When we account for all identified sunken vessels (614), do the categories (depicted in the pie chart) still make sense?

As we begin our sunken vessel pollution mitigation activities we'll be accounting for (and reporting) amount of oil and hazmat removed from each sunken vessel. We understand there might be lag time in the mitigation work performed and obtaining accurate numbers.

Thank you all for your time and expertise in this important work. The CG continues to learn the many ins/outs of NDOW and RM data. We want to showcase the system and understand the data feeds as much as possible.

Keep up the great work!

V/r,

Mike Sams
